IRS Income Tax Return Verification Launched on IDValidation Portal

“Historically, IRS Form 4506-T was only used in the finance sector. Our COO, Chuck Salvia, launched this service to the background screening community to reveal hidden data and exact earning information by accessing official IRS governmental records. This is far superior to any alternative methodologies,” says Paul Campione, CID CEO.

Arcadia, CA – IDValidation (IDV) from Computer Information Development (CID) announces the IRS Income Tax Return Verification (ITRV) service on their web based platform.

ITRV is a governmental service matching applicant personal identifiers direct to Internal Revenue Service (IRS) records and is used to verify income, mitigate fraud, and strengthen due diligence processes. It's used by Lenders, HR Departments, Background Screening companies, Property Management, and other businesses whenever income verification is needed or required.

CID's IDValidation process is simple, fast, and efficient. The IDV platform generates Form 4506T which is then ready for applicant signature. The signed form is returned electronically to IDV and submitted to the IRS. Results are returned in two business days or less.

Personal and business income tax returns can be requested from the IRS, including:

Form 1040 and others (Forms: **1065, 1120 series**) for current year and prior 3 years (4 year total).

Form W-2, 1099 and others (Forms: **1098 series and 5498 series**) may be available for up to 10 years.

ITRV is the second service offering on the IDV platform. It joins Consent Based SSN Verification which protects vital business interests by accessing the SSA Master File and Death Index to match Name, SSN, DOB, Gender, and Death Indicator following the signed consent of the applicant/SSN holder. Like ITRV, CBSV is used for many business purposes including, Loan Originations, Fraud Investigations, Collections, Employment (both pre- and post-hire), Applicants of all types (customers, members, patients, students, policyholders, etc.) and to meet Compliance requirements.

Now businesses can obtain accurate income information with a much quicker turn-around time and mitigate fraud direct from the IRS with ITRV from IDValidation.
